Caring • Reliable • Empathetic

About Our Centre

Union Hair Centre is dedicated to providing specialized diagnosis and treatment for hair loss. All offered treatment plans undergo rigorous clinical evaluation. Early-stage hair loss in women can be difficult to notice. Professional assessment can help identify changes in hair and scalp health at an early stage and guide appropriate treatment options. Our medical team customizes personalized treatment plans based on each patient's individual condition and clinical presentation, aiming to address the underlying causes of hair loss and help women regain healthy hair. Our center provides the following professional assessment and therapeutic services:

Hair density analysis

Scalp health evaluation

Medication therapy

Laser therapy

Hair transplant therapy

Women's Hair Loss
& Hair Care Management

Do you notice any of these signs or risk factors?

- ☐ Widening hair parting
- ☐ Increased hair shedding when washing your hair
- ☐ Reduced hair volume compared with before
- ☐ Hair strands becoming thinner
- ☐ Scalp on the crown becoming more visible
- ☐ Family members with hair loss

Results Analysis

- ☒ **1 - 2 selected:**
Some early indicators may be present. It is advisable to monitor your hair condition.
- ☒ **3 or more selected:**
Several signs or risk factors associated with hair loss are present. Further professional assessment is recommended, as early-stage hair loss may involve progressive hair follicle miniaturization.

If these signs persist, we recommend consulting a doctor for professional assessment. This checklist is for general reference only and does not constitute a medical diagnosis.

Common Factors of Women's Hair Loss

-  Genetic factors
-  Scalp conditions
-  Stress and lifestyle factors
-  Hormonal changes (e.g. postpartum, menopause, etc.)
-  Medical conditions (e.g. anemia, thyroid issues)
-  Restrictive dieting or nutritional deficiencies
-  Medication side effects

Hair Health Assessment

Our medical team conducts comprehensive hair and scalp assessments using professional diagnostic equipment. Doctors will provide personalized advice based on individual results. We provide the following assessment services:

Hair density

Scalp health

Hair thickness

Type of hair loss

Personalized Hair Treatments

Doctors will recommend personalized treatment plan based on individual conditions.

Hair Transplant Therapy

Healthy hair follicles are transplanted to thinning areas to restore growth.

- Follicle units are carefully extracted using specialized tools
- Depth, angle, and direction are precisely controlled
- Microscopic handling ensures accuracy
- Hair follicles are implanted into thinning areas with precision instruments

In addition to minimally invasive hair transplantation, Union Hair Centre provides a range of evidence-based solutions, subject to medical assessment.

Medication Therapy

Utilizing FDA-approved topical medication may help increase hair thickness, extend the growth phase, and stimulate regrowth. The choice of medication, dosage and frequency will be determined by a doctor based on individual assessment.

Laser Therapy

Low-level laser treatment may help improve hair loss and stimulate follicle regeneration.

*All treatments are subject to prior evaluation and determination by a registered doctor.
