

Operation Information

Mediastinoscopy/ Mediastinotomy

Introduction

Mediastinoscopy and mediastinotomy are the operation carried out under a general anesthetic. Its allow doctors to take biopsies from the lymph nodes that surround the airways and large blood vessels in the chest. The main purpose of this procedure is to check for any lymphatic cancers and identify any infections.

Outcomes

The procedure will looks for the lymph nodes inside the chest and other abnormalities, biopsies will be taken and send to Laboratory for investigation if required.

Procedures

1. This operation is performed under general anaesthesia.
2. For mediastinscopy, a small cut will be made at the bottom of the neck, its allow doctor to take biopsies there. For mediastinotomy, a small cut will be made on the front of the chest. A small piece of rib will need to be removed to allow the doctor to take biopsies.
3. Biopsies will be taken and send to laboratory for investigation.
4. Incision will be closed with dissolvable stitches.

Possible Risks and Complications

1. Bleeding
2. Infection
3. Inadequate tissue for definitive diagnosis rendering further procedure
4. Rarely allergic reaction to anaesthetics
5. Accidentally puncture of blood vessels leading to hemorrhage (Extremely rare)

** The risks listed above are in general terms and the possibility of complications is not exhaustive. Please understand that even though all operations are carried out with utmost professionalism and care this does not rule out the possibility of complications arising. In the event of peripheral organ damage or post-operative haemorrhage or leakage, further operations may be required.

Pre-operative Preparations

1. Good hygiene can prevent surgical wound infection. Therefore, we advise you to clean up yourself on the day of operation.
2. The procedure and possible complications will be explained by the doctor and a consent form must be signed prior to the operation.
3. Please inform the doctor and nurse all your past medical history, previous surgical operations, current medication and any complication with drug or anaesthesia. Please inform doctor if you are taking medications that affect blood coagulation such as Aspirin, Warfarin, Xarelto or Pradaxa, non-steroidal anti-inflammatory drug (NSAID) such as ibuprofen, naproxen and Chinese medication.
4. No food or drink six hours before operation.

5. Please change into a surgical gown after removing all clothing including undergarments, dentures, jewellery and contact lenses.
6. Please empty your bladder before the operation.

Post-operative Preparations

General

1. After general anaesthesia, you may:
 - experience discomfort in the throat after tracheal intubation.
 - experience side effects of anaesthesia includes feeling tired, drowsy, nausea or vomiting. Inform the nurse if symptoms persist or worsen.
2. Please inform the nurse of wound pain. Proper pain relief treatment by injection or oral medication may be prescribed by the doctor.

Wound Care

1. Wound dressing can be removed after 24 to 48 hours if the wound is clean and dry. It is normal to have some slight swelling and bruising around the wound.
2. If you have had a mediastinotomy, it is normal to have some bulging where the small piece of rib has been removed.

Advices on Discharge

1. Prescribed pain medication may be taken as needed.
2. Immediately consult your doctor or return to hospital for professional attention in the event of shortness of breath, wound swollen and leaking fluid, coughing up blood, shivering, high fever over 38°C or 100°F, or any other unusual symptoms etc.
3. Any follow-up consultations should be attended as scheduled.

Should there be any enquiries or concerns, please consult the attending doctor.

Under the professional care of the doctor, you will gradually recover. We wish you all the best during your treatment and recovery.

If you have any questions after reading the entire leaflet, please write them down in the spaces provided in order for the doctor to further follow-up.
