

Operation Information

Appendectomy (Open/Laparoscopic)

Please scan the QR code below to get the PDF file.

Introduction

Appendicitis is the inflammation of the appendix caused by faecal impaction or other reasons. Appendicitis runs a rapid course. It commonly presents with abdominal pain and discomfort. After a few hours, the abdominal pain increases and shifts to right lower abdomen with nausea, vomiting and fever. Appendicitis could occur in man or woman of any age. Inflamed appendix should be removed by operation, otherwise it would progress with rupture causing peritonitis, which is life-threatening. Other indications for appendectomy included incidental removal during other surgical procedures or tumor of appendix.

Outcomes

This operation is a surgical intervention to remove an inflamed appendix to prevent further complications.

Procedures

- 1. The operation is performed under general anaesthesia.
- 2. The operation could be performed by open appendectomy or laparoscopic appendectomy.
 - i) Open appendectomy:
 - An incision is made over right lower quadrant or lower midline of abdomen.
 - ii) <u>Laparoscopic appendectomy</u>:
 - 1 to 3 separated small incisions made in abdomen for instruments insertion.
- 3. Peritoneal cavity is entered with its content examined and pathology identified.
- 4. Appendix and its blood supply are ligated and appendix removed.
- 5. Drain(s) for removal of fluid might be inserted depending on necessity.
- 6. The wound is closed with sutures.

Possible Risks and Complications

- A. Complications related to anaesthesia: (very rare, with possibility < 0.01% but could lead to permanent damage or death)
 - 1. Cardiovascular complications: myocardial infarction or ischaemia, stroke, deep vein thrombosis, pulmonary embolism, etc.
 - 2. Respiratory complications: atelectasis, pneumonia, asthmatic attack, exacerbation of chronic obstructive airway disease
 - 3. Allergic reaction and shock
- B. Complications related to operation:
 - 1. Wound infection or dehiscence
 - 2. Pelvic collection or abscess
 - 3. Faecal fistula
 - 4. Damage to other nearby organs, e.g. urinary bladder, colon
 - 5. Leakage over ligation site
 - 6. Adhesive colic or intestinal obstruction
 - 7. Mortality

** The risks listed above are in general terms and the possibility of complications is not exhaustive. Please understand that even though all operations are carried out with utmost professionalism and care, this does not rule out the possibility of complications arising. In the event of peripheral organ damage or post-operative haemorrhage or leakage, further operations may be required.

Pre-operative Preparations

- 1. Usually performed as an emergency operation once the diagnosis is made.
- 2. Good hygiene can prevent surgical wound infection. Therefore, we advise you to clean up yourself on the day of operation.
- 3. The procedure and possible complications will be explained by the doctor and a consent form must be signed prior to the operation.
- 4. Please inform the doctor and nurse all your past medical history, previous surgical operations, current medication and any complication with drug or anaesthesia. Please inform doctor if you are taking medications that affect blood coagulation such as Aspirin, Warfarin, Xarelto or Pradaxa, nonsteroidal anti-inflammatory drug (NSAID) such as Ibuprofen, Naproxen and Chinese medication.
- 5. No food or drink six to eight hours before operation (If clinically allow).
- 6. Clipping of surgical site may be necessary prior to the operation.
- 7. Pre-medication or intravenous infusion may be given as doctor's prescription.
- 8. Antibiotic prophylaxis is required before the operation.
- 9. Please change into a surgical gown after removing all belongings including undergarments, dentures, jewellery and contact lenses.
- 10. Please empty your bladder before the operation.

Post-operative Instructions

General

- 1. After general anaesthesia, you may:
 - experience discomfort in the throat after tracheal intubation.
 - experience side effects of anaesthesia including feel tired, drowsy, nausea or vomiting. Inform the nurse if symptoms persist or worsen.
- 2. Please inform the nurse of wound pain. Proper pain relief treatment by injection or oral medication may be prescribed by the doctor.
- 3. Intravenous drip may continue till feeding resumes.
- 4. May need further doses or a full course of antibiotics.

Wound Care

- 1. In the first one or two days after the operation, keep dressing intact and dry unless otherwise indicated.
- 2. Light dressing may be applied after wound inspected from day 2 onward.
- 3. The wearing of loose-fitted clothing is encouraged to avoid irritation of the wound.
- 4. Stitches or skin clip (if present) will be taken off around 7-10 days time.

Diet

- 1. You may be restricted from eating or drinking in the initial period.
- 2. A normal diet may be resumed as instructed by doctor in the next day.

Advice on Discharge

- 1. Prescribed pain medication may be taken as needed.
- 2. Increase activities and walking gradually is encouraged.
- 3. Heavy lifting, strenuous activities, excessive body bending or extension should be avoided for 4-6 weeks.
- 4. Complete the antibiotics course if considered necessary by doctor.
- 5. You may take shower after the operation but must ensure that the dressing is waterproof and remains clean and dry.
- 6. The wearing of loose-fitted clothing is encouraged to avoid irritation of the wound.
- 7. Immediately consult your doctor or return to hospital for professional attention in the event of severe wound pain associated with redness and swelling, tenderness, secretion of pus, bleeding, shivering, high fever over 38°C or 100.4°F, or any other unusual symptoms etc.
- 8. Any follow-up consultations should be attended as scheduled.

Should there be any enquiries or concerns, please consult the attending doctor.

Under the professional care of the doctor, you will gradually recover. We wish you all the best during your treatment and recovery.

If you have any question order for the doctor		_	flet, please write	them down in the	spaces provided
